

ABSTRACT

Apparatus and Method of Operation for Quick Anchoring Equipment

The invention is comprised of a Quick Anchoring Equipment system (30) which permits underwater connection and disconnection of anchoring lines (2) to anchoring devices that are already fixedly attached to the bottom of the sea. The Quick Anchoring Equipment (30) consists of chain cable, cables, hooks and buoys specifically organized and configured, which, are attached at the submerged end of the anchoring line (2), which makes it possible with a single support boat (5), together with a remote operated vehicle (6), to carry out this whole anchoring lines (2) operation fundamental to floating platforms (1). The invention also includes the method to install and uninstall the Quick Anchoring Equipment (30).
